

For those of you traveling to LLNL on 9/13:

Write a few paragraphs about your trip and what you learned. Spend some time thinking about the mission of the nonproliferation work supported by NSSC and LLNL. Include how you think neutral particle transport and new developments in that field might fit into what NNSA NA-22 (the agency funding NSSC) is doing through NSSC.

For those of you not on that trip:

Look through the National Nuclear Security Administration (NNSA) Nonproliferation Program (NA-22)

website: <https://nnsa.energy.gov/aboutus/ourprograms/nonproliferation> (Links to an external site.). Spend some time understanding what their mission is and what programs they fund to accomplish that mission. Write a few paragraphs about how you think neutral particle transport and new developments in that field might fit into what NNSA NA-22 is doing.

In both cases, please submit what you write (with your name and date!) as an attachment or direct text entry here on bcourses.
